(Sub)Titles & ToC

Define titles by placing an equationsign around your text. No spaces before the first, and no spaces following the last. No textformatting within the title.

```

= heading 1st level =
== heading 2nd level ==
=== heading 3rd level ===
==== heading 4th level ====
===== heading 5th level =====
    
```

Automatically generate a table of contents based on you (sub)titles:
 <<TableOfContents>>

heading 1st level

heading 2nd level

heading 3rd level

heading 4th level

heading 5th level

Tips and Tricks

- Always use the Preview button to see what you're about to save! This saves numerous recent-changes entries...
- Always enter a comment on what you have changed (summary/workingcopy/...)
- Trivial changes are trivial, mark them that way to help people save their inboxes - a trivial change doesn't send an email.
- Don't hesitate to ask! (either a colleague, a friend on the mailinglist or IRC).

Block Parsers

- Open and close a block with at least three curly braces {{{ }}} - at least three, same amount to close.
- The **optional** parser on the next line states how this block will be rendered. Possible values may include: creole,python,cplusplus,**java**,pascal,IRC,**CSV**,**SQL**,**D** **IFF**,html,wiki,**GraphViz** (*Italic is non-default*)
- Example:

```

{{{
#!sql
Select * from dual
}}}
or
{{{
#!CSV ;
a;b;c;d
1;2;3;4
3;4;5;6
}}}
    
```

```

Lijnummers aan/uit doen
1 Select * from dual
    
```

of

a	b	c	d
1	2	3	4
3	4	5	6

Access Rights

Start a page with a line similar to the following:
 #acl ServiceDeskGroup:read,write ↵
 MyGlobalGroup:read All:none

To give the servicedesk r/w acces, the global group can only view this page and no-one else in the world can.

Whitespace and breaks

- Indent text by inserting a space before the first character.
- A soft *enter* is inserted using <
>
- Start a new paragraph by entering two enters – also known as an empty line.
